## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 12\_Q1

Attempt : 1

Total Mark : 10

Marks Obtained : 10

### Section 1 : Coding

#### 1. Problem Statement

Sabrina is working on a project that involves analyzing a set of numbers. In her exploration, she encounters scenarios where extracting even numbers and finding their sum is essential.

Create a program that calculates the sum of even numbers from a given array of integers using a lambda expression.

#### ***Input Format***

The first line of input consists of an integer N, representing the size of the array.

The second line consists of N space-separated integers, representing the elements of the array.

#### ***Output Format***

The output prints the sum of the even integers from the array.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 3

29 37 45

Output: 0

### **Answer**

// You are using Java

import java.util.\*;

import java.util.stream.\*;

class EvenSumLambda {

public static void main(String[] args) {

Scanner sc = new Scanner(System.in);

int N = sc.nextInt();

int[] arr = new int[N];

for (int i = 0; i < N; i++) {

arr[i] = sc.nextInt();

}

int sum = Arrays.stream(arr)

.filter(x -> x % 2 == 0) // lambda to select even numbers

.sum();

System.out.println(sum);

}

}

**Status : Correct**

**Marks : 10/10**
